

## **Rationalization of School Curriculum**

### **Background**

The conventional teacher-centered and rote learning form of education has served us well through ages. As the education system in Bhutan embraces the 21<sup>st</sup> Century education framework and principles, it warrants a paradigm shift in curriculum design and development, including the pedagogy, commensurate the competency based learning. An approach, which underscores that learning in the 21<sup>st</sup> Century is for the development of competencies through active engagement of learners in learning experiences, guided by formation and utilization of “working knowledge”. This empowers learners to take responsibilities of their learning and develop “portable skills or soft skills,” such as critical thinking, creativity, communication and collaboration, vital for all as individuals with unique talent and competencies. The current culture of curriculum design and practices in schools, however, do not render condition to facilitate realisation of the national aspiration of nurturing “nationally rooted and globally competent” citizen.

Amongst others, it has always been a concern for REC on the extent, relevancy and quality of the curriculum in all subjects. Thus, in order to facilitate quality learning for 21<sup>st</sup> Century education, REC has initiated major curriculum reform in all subjects.

### **Rationale**

The Bhutan Education Blueprint 2014-2024 indicated that the existing curriculum was ‘heavy’. This was echoed as one of the major pointers in the National School Curriculum Conference 2016 that the curriculum was ‘vast’. These findings led to the need for curriculum “thinning” [Resolution 3.1.10 (IV)]. In response to these findings, REC started the rationalization of the existing curriculum by reviewing and screening out the obsolete and irrelevant content, and updating them with the most recent information and also rectifying errors in the textbooks. Therefore, some portions of the syllabi from several subjects, for instance, have been dropped. The rationalization or thinning of curriculum is one of the important considerations made while developing new textbooks based on new curriculum frameworks.

The curriculum rationalization process also aligns very well with Resolution 13 of the National Education Conference 2018 of “Doing away with the Saturday classes”. The para 13.4 of the resolution requires ‘REC to work on curriculum thinning and review of time allocation for each subject’. This resolution has further facilitated REC to expedite the curriculum rationalization and review the time and period allocation for each subject.

### **Rationalization of the school curricula is based on the following strategies:**

- i. Review the goals and outcomes of each subject to identify topics, chapters, learning activities, exercises and assessment.
- ii. Develop rationalized syllabus for each subjects ensuring conceptual linkages and progression within the chapter or topic in the textbooks.
- iii. Minimize lexical density in text by reducing heavy textual materials from the textbooks.

- iv. Remove topics, learning activities or assessment items, which are redundant, overlapping, irrelevant or inappropriate.
- v. Delete irrelevant or inappropriate illustrations or diagrams, and examples from the text.
- vi. Update and align the content width and depth with the teaching time available for each subject.
- vii. The revised syllabi for each subject are categorised and compiled under four subject b classifications, namely STEM, Social Sciences, Language, and TVET & Commercial Studies.

**The review of the instructional time allocation is based on the following criteria:**

- i. Maintain the instructional time requirement at the international standard.
- ii. Maintain gradual increase of instructional time across most of the key stages.
- iii. Reduce the instructional time for each subject across the grades based on the doing away of the Saturday classes.
- iv. Allocate time for personal development learning areas, such as HPE, Arts Education, Values Education, CGC, TVET Program (clubs and PVOP).
- v. Non-curricular activities and programmes are to be conducted outside the instructional hours.
- vi. Calculate 150 actual curricular instructional days (excluding examination days in June and November months) in an academic year based on 5 working days per week.
- vii. Calculation of instructional time is based on 8 periods a day of 40 minutes each.

**Conclusion**

Instructional time refers to the actual contact time in the classroom. This is the minimum time available for the delivery of the curriculum including assessment. Instructional Time equals to number of days multiplied by number of periods per day times duration of one period (180 x 8 x 40). The rationalization of the curriculum is based on 150 days of the actual instructional time.

Instructional days are the total number of days within which the curricular activities are conducted. Within these days, a maximum of 5.33 hours (320 minutes) are available for actual classroom instruction per day. This calculation is based on 8 periods a day of 40 minutes each. The average instructional time in the OECD countries ranges from 799 to 915 hours per year. This includes all the educational activities that happen in the school in a day. However, the calculation of instructional time for the rationalized curriculum is based on the actual contact time for curriculum delivery, which has resulted in more instructional time than in OECD countries.

Lastly, it must be noted that the instructional time and days are suggested guide. Thus, it is envisaged that schools will make adjustment in instructional time as deemed applicable.

Class: IX

Subject: Biology

Sl. No.	Chapters	Time (mins)	Weighting (%)	Changes (deletion, addition, or change in the sequence)	Reasons
1	Chapter 0: Introduction	70	0%		
2	Chapter 1: The Cell	390	11%		
3	Chapter 2: Green Plants	740	23%	Remove <b>functions of essential elements</b> from the instruction (sub-chapter: Transportation Systems in Plants)	This topic seems irrelevant as well as incongruent with the scope defined by the very chapter
4	Chapter 3: The Digestive System	160	7%	Teach <b>mixing</b> and <b>moments</b> , i.e., <b>swallowing</b> and <b>peristalsis</b> as part of <b>Ingestion</b> while <b>segmentation</b> as part of <b>digestion</b> and <b>absorption</b> (Sub-chapter: Human Digestive System)	These physical movements help in ingestion, digestion, and absorption
5	Chapter 4. The Circulatory System	265	7%	Remove <b>functions of cardiovascular system</b> from the instruction (Sub-chapter: Physiology of Cardiovascular System)	It is a mere repetition of the concepts spelled out in the introductory note of preceding chapter, i.e., Components of the Cardiovascular System
6	Chapter 5: The Respiratory System	255	6%	Remove <b>types of respiration</b> from the instruction (Sub-chapter: Human Respiratory system)	The concepts are beyond the scope of the chapter
7	Chapter 6: The Nervous System	390	8%		

8	Chapter 7: The Endocrine System	200	6%	<ol style="list-style-type: none"> <li>1. Remove <b>menstrual cycle</b> from the instruction (Sub-chapter: Endocrine System)</li> <li>2. Remove <b>hormones and their control of menstrual cycle</b> from the instruction (Sub-chapter: Endocrine System)</li> <li>3. Teach about the hormones secreted by testes and ovaries- Sex Hormones (estrogen, progesterone, and testosterone) (Sub-chapter: Endocrine System)</li> </ol>	<ol style="list-style-type: none"> <li>1. The concepts sound more of general physiology of female reproductive system. Moreover, the role of gonadotropins specified in are just the repetition of the preceding topic(s)</li> <li>2. It also a mere repetition of the preceding topic(s)</li> <li>3. Testes and ovaries also major endocrine glands</li> </ol>
9	Chapter 8: Variation, Genetics, and Evolution	730	16%		
10	Chapter 9: Health and Harmful Substances	200	6%		
11	Chapter 10: Organisms in their Environment	200	10%	<ol style="list-style-type: none"> <li>1. Remove <b>predation and parasitism</b> given as part of the topic <b>Feeding interaction</b> from the instruction (Sub-chapter: Interactions and Adaptations in their Environment)</li> </ol>	<ol style="list-style-type: none"> <li>1. It is a mere replication of the aspects spelled out in topic “<b>predator and prey relationship and symbiosis</b>” as well as those given in activity 10.1</li> </ol>

				<p>2. Teach <b>decomposition</b> after <b>symbiosis</b> (Sub-chapter: Interactions and Adaptations in their Environment)</p> <p>3. Remove <b>nutrient cycle</b> from the instruction (Sub-chapter: Interactions and Adaptations in their Environment)</p> <p>4. Remove <b>homeostasis</b> from the instruction. (Sub-chapter: Interactions and Adaptations in their Environment)</p>	<p>2. It also one of the forms of ecological interactions</p> <p>3. It is a mere duplication of those given in class 9 chemistry</p> <p>4. It is more or less identical to those spelled out in the preceding chapter, i.e., Homeostasis and Body Control System.</p>
		<b>3, 600 minutes</b>	<b>100%</b>		

The total time required to complete the topics is 3, 600 minutes or 90 periods of 40 minutes each.

Class: X

Subject: Biology

Sl.No.	Chapters	Time (mins)	Weighting (%)	Changes (deletion, addition, or change in the sequence)	Reasons
1	Chapter1: The Cell- The Unit of Life	280	10%	Remove <b>table 1.1: The parts of eukaryotic cell and their main features and functions</b> from the instruction. <i>However, while teaching about eukaryotic cell, students must be told that they already learnt the concepts given in table 1.1 in class 9 Biology (Sub-chapter: Types of Cell)</i>	The concepts spelled out in table 1.1 are just the repetition of those given in class 9 biology.
2	Chapter 2: Green plants	600	17%	1. Remove <b>transportation of food material</b> from the instruction (Sub-chapter: Transportation System in plants)  2. Remove <b>mineral nutrient requirement in plants and essential mineral elements</b> from the instruction (Sub-chapter: Transportation System in plants)  3. Remove <b>Importance of water to the plants</b> from the instruction (Sub-chapter: Transportation System in plants)	1. It is a mere duplication of those spelled out in class 9 biology  2. The concepts are beyond the scope of the chapter  3. The concepts are incongruous with the scope defined by the chapter

3	Chapter 3: Human as Organisms	870	18%		
4	Chapter 4: Response and Coordination in Human	450	14%	<ol style="list-style-type: none"> <li>1. Remove <b>terms used to describe feedback system</b> from the instruction (Sub-chapter: Hormones)</li> <li>2. Remove <b>symptoms of diabetics, treatment of diabetics, and Effect of insulin</b> given on page number 117 from the instruction (Sub-chapter: Hormones)</li> <li>3. Remove <b>adrenaline and sex hormones</b> from the instruction. <i>However, the role and adverse effects of anabolic steroids must be taught</i> (Sub-chapter: Hormones)</li> </ol>	<ol style="list-style-type: none"> <li>1. The terms do not seem to aid in the conceptualisation of feedback mechanism</li> <li>2. A mere repetition of the preceding topics</li> <li>3. A mere repetition of those given in class 9 biology</li> </ol>
5	Chapter 5: Micro-organisms, Diseases, and Drugs	400	12%		
6	Chapter 6: Variation,	580	16%	Remove <b>Importance of mutations</b> from the instruction	The concepts make the chapter content laden and taxing

	Inheritance, Evolution			(Sub-chapter: Variation)	
7	Chapter 7: Living Things in their Environment	420	13%		
		<b>3, 600 minutes</b>	<b>100%</b>		

The total time required to complete the topics is 3, 600 minutes or 90 periods of 40 minutes each.

**Class: XI      Subject: Biology**

Sl No	Chapter	Time (mins)	Weighting (%)	Remove the following topics or chapters, or paragraphs from the instruction. However, please note that those that need to focus, change, add in, or arrange accordingly during teaching are spelled out in caps or capital letters	Reasons
1	Chapter 1: Biological Molecules	600	6%	<ol style="list-style-type: none"> <li>1. Biological compounds</li> <li>2. Water</li> <li>3. Biological importance of water</li> <li>4. Functions or role of monosaccharides</li> <li>5. Function of disaccharides</li> <li>6. Functions of disaccharides</li> <li>7. Functions of storage polysaccharides</li> <li>8. Use of cellulose</li> <li>9. Functions of mucopolysacharrides</li> <li>10. Functions of polysaccharides</li> </ol>	The chapter per se appears bulky, voluminous, textual, and content laden with high lexical density. Moreover, the topics listed seems vague, generic, repeated, redundant, or incongruent with the scopes of the chapter

				<ul style="list-style-type: none"> <li>11. Properties of fats</li> <li>12. Composition of waxes</li> <li>13. Some important phospholipids (page 26-27)</li> <li>14.
